Turn Your AI Assistant into a Credit Default & Downgrade Watcher

Set up a **scheduled task** so your AI assistant flags US companies that miss debt payments or get **downgraded** — automatically.

1 Open your AI assistant

Use ChatGPT, Claude, Gemini, Copilot, Perplexity or another web-enabled AI assistant and log in to your account.

2 Copy and paste the prompt

Use the prompt below. Update any details to match your interests and preferences.

3 Set up a scheduled task

Ask your AI assistant to run the task at your preferred time, for example every weekday morning **at 7:30am**. Follow the platform's steps for scheduled tasks.

4 Receive your daily default alert

Your AI assistant prepares the report every weekday. Receive a notification in the app, or configure email delivery where supported.

The Prompt (Copy and paste this into your AI assistant)

Create a scheduled task that runs every weekday morning at 7:30am.
Research US companies that, in the last 24 hours (72 hours on Mondays), have failed to repay their debts or show clear signs of imminent default, including:
• Missed interest/coupon or principal payments, and companies that have entered a grace period.
• Distressed exchanges, debt restructurings, forbearance agreements and covenant waivers.
• Rating actions by S&P, Moody's and Fitch: downgrades (especially to CCC or below), default ratings (D, SD, RD), CreditWatch negative and negative outlooks.
• Chapter 11 and Chapter 7 bankruptcy filings.
• Early warning signs: going-concern warnings, late SEC filings (NT 10-K/10-Q), 8-K debt acceleration events, hiring of restructuring advisers.
Use credible sources such as S&P Global, Moody's, Fitch, SEC EDGAR, Reuters, Bloomberg, Wall Street Journal, Financial Times and bankruptcy claims agents (Kroll, Stretto, Epiq).
Check this watchlist of my customers (including parent companies) first and put any match at the top: [PASTE CUSTOMER NAMES]
For each item, give me:
Company | Parent / Industry | Event type | What happened (date, amount) | Severity (Default / Near-default / Downgrade / Warning) | Why it matters for trade creditors | Credit Manager action | Link to source
Group the results into clear sections:
1. Watchlist matches
2. Payment defaults and bankruptcies
3. Downgrades and negative watch
4. Early warning signs
Keep the update concise (aim for 10-15 key items) and say clearly when something is unconfirmed or based on a single source.
Only include genuinely new or materially updated items (avoid repeating items you have already reported).

Tips for the best results

- Add your key customers and their parent companies to the watchlist.
- Ratings and bonds usually sit at the parent, so include group names.
- Ask for "BB- and below only" to cut investment-grade noise.
- Always click the source before you put an account on hold.
- Private customers rarely make the news: pair this with trade-payment data.

Delivery options

Option 1: In-app notification (standard)
Receive a notification when your daily briefing is ready in your AI assistant.

Option 2: Email delivery (where supported)
Connect your AI assistant to Gmail or Outlook to receive the full report by email.

Why this works

- Tracks defaults, downgrades and filings across agencies and the SEC.
- Flags your own customers first, so you can act the same day.
- Catches warning signs before a missed payment becomes a bankruptcy.
- Helps you tighten terms or limits before invoices go past due.
- Combines human expertise with the power of AI.
