Where should your AI agent instructions live?

Debt Register

One reusable set of rules. The right home on each platform.

For colleagues to use the same assistant, save its instructions and configure access in the relevant product.

PLATFORM	WHERE THE INSTRUCTIONS LIVE	HOW COLLEAGUES ACCESS IT
ChatGPT	**Settings > Plugins > your plugin.** Store reusable instructions in a skill inside the plugin, with its workflow rules and reference material.	Share with people or groups, or publish to the workspace directory. Colleagues install the plugin. Official guide
Claude	**Projects > your project > Project instructions.** Add supporting documents to project knowledge.	On Team or Enterprise, share with **Everyone at your organisation**. Colleagues use it in their own chats. Official guide
Microsoft 365 Copilot	**Agent Builder > your agent > Instructions.** Use Copilot Studio for advanced workflows and deployment options.	Share with users/groups, enable organisation-wide access where allowed, or submit to the organisation's Agent Store for approval. Official guide
Google Gemini	**Gems > your Gem > Instructions.** Attach the reference files the Gem should use.	Share the Gem with colleagues or a wider permitted audience. Workspace administrators control sharing availability. Official guide
Grok	**Grok Bot: Description + Skills.** Description holds permanent rules; Skills hold repeatable procedures. Setup guide	Publish as a **Team Bot**, where available. Teammates use one centrally maintained setup, each in their own chat. Sharing guide
Meta AI	**No new AI Studio build or edit route.** New AI character creation and editing stopped in August 2026.	Existing characters and chats remain active. AI Studio cannot currently build or update a new company assistant. Meta update

Keep a master copy. Store the approved instructions in a shared company document with an owner and version date. Adapt that copy for each platform; changes to the document do not automatically update the assistants.
