Turn Your AI Assistant into a Corporate Credit News Watcher

Set up **a scheduled task** so your AI assistant follows the latest US corporate and **credit news** — automatically, and regularly.

1 Open your AI assistant

Use ChatGPT, Claude, Gemini, Copilot, Perplexity or another web-enabled AI assistant and log in to your account.

2 Copy and paste the prompt

Use the prompt below. Update any details to match your interests and preferences.

3 Set up a scheduled task

Ask your AI assistant to run the task at your preferred time, for example every weekday morning **at 7:30am**. Follow the platform's steps for scheduled tasks.

4 Receive your daily credit briefing

Your AI assistant prepares the report every weekday. Receive a notification in the app, or configure email delivery where supported.

The Prompt (Copy and paste this into your AI assistant)

Create a scheduled task that runs every weekday morning at 7:30am.

Research the latest US corporate credit news, including:

- Company financial stress, payment delays, restructurings, bankruptcies, distressed debt and Chapter 11 filings.
- Credit ratings changes and outlook updates (S&P, Moody's, Fitch).
- Major industry trends and risks that could impact corporate credit (e.g. sector headwinds, supply chain issues, interest rates, trade policy, regulatory changes).
- Key economic indicators and policy developments in the US that could affect corporate credit conditions (e.g. Fed decisions, inflation, employment, treasury yields).

Use a range of credible sources such as Reuters, Bloomberg, Wall Street Journal, Financial Times, CNBC, MarketWatch, S&P Global, Moody's, Fitch, The Economist and other reputable financial news sites.

Focus on material news and developments that are relevant for a B2B Credit Manager.

For each item, give me:
Headline | Company / Sector | What happened | Why it matters for credit risk | Credit Manager action | Link to source

Group the results into clear sections:

1. Major corporate credit events (e.g. bankruptcies, restructurings, rating downgrades)
2. Industry and sector trends
3. US economic and policy news with credit implications
4. Other notable credit-related news

Keep the update concise (aim for 10-15 key items) and highlight any items that may require closer monitoring.
Only include genuinely new or materially updated stories (avoid repeating items you have already reported).

Tips for the best results

- Add or remove specific industries or sectors you want to follow.
- Include key companies, suppliers or customers to watch.
- Set your preferred time (e.g. 7:30am).
- Ask for a short summary at the top with the key takeaways.
- You can refine the task at any time (e.g. add regions, sectors or topics).

Delivery options

Option 1: In-app notification (standard)
Receive a notification when your daily briefing is ready in your AI assistant.

Option 2: Email delivery (where supported)
Connect your AI assistant to Gmail or Outlook to receive the full report by email.

Why this works

- Monitors relevant corporate credit news across multiple trusted sources.
- Helps you spot early warning signs and emerging risks.
- Saves time with a concise, relevant daily briefing.
- Supports better credit decisions for your business.
- Combines human expertise with the power of AI.
