Where should your AI agent instructions live?

Debt Register

One reusable set of rules. The right home for your team.

Share the assistant, not unrestricted access to your confidential policy documents or customer data.

PLATFORM	WHERE THE INSTRUCTIONS LIVE	HOW COLLEAGUES ACCESS IT
ChatGPT	**Agents** > Create > agent builder. Set instructions, tools, skills and files; optionally connect read-only company sources.	Use agent access: **organisation link** or **workspace directory**; assign editors where needed. Plugins can distribute separate skills and integrations. Agents · Plugins
Claude	**Projects** > Set project instructions; add approved reference documents to project knowledge.	On Team/Enterprise, share with invited colleagues or the organisation (if allowed). Set **Can view** / **Can edit**. Official guide
Microsoft 365 Copilot	**Agent Builder** > Configure > Instructions. Connect authorised SharePoint and other approved knowledge.	Share with named users / groups; **Copilot Studio** is the path for broader deployment and multiple channels. Official guide
Google Gemini	**Gems** > your Gem > Instructions; add permitted reference files or Drive sources.	Share the Gem with colleagues, granting **Viewer** or **Editor** access. Viewers can see instructions and attached files. Official guide
Grok	**Grok Bot** > Create a **Team Bot**; configure Description, Skills, Files and approved plugins.	Publish to the team so colleagues use one centrally maintained Bot in separate chats (plan permitting). Team Bots
Meta AI	**No verified new AI Studio company-agent creation route.** Existing AI characters remain usable.	Meta stopped AI Studio creation/editing on 10 Aug 2026. Not recommended as a controlled credit-policy agent. Meta update

Credit policy rule: Store approved policies in SharePoint/Drive or another controlled repository (owner + version). Give agents least-privilege read access; do not put customer financials in shared instructions. Require human credit approval.

Where should your AI agent instructions live for just you?

Debt Register

One reusable set of rules. A private home on each platform.

Choose a private Project or agent; for sensitive work, use approved data and access controls.

PLATFORM	WHERE THE INSTRUCTIONS LIVE	HOW YOU USE IT
ChatGPT	**Projects** > your project > ... > Project settings. Or **Agents** > Create > build an agent and choose **Private to me**.	Use a **Project** for ongoing chats and files; use a **private Agent** for a repeatable task with tools/skills. Projects · Agents
Claude	**Projects** > New Project > Set project instructions. Add documents to project knowledge.	Start chats from that project. On Team/Enterprise, choose **Keep it private** (no invitations). Official guide
Microsoft 365 Copilot	**New agent** > Configure > Instructions. Set knowledge sources and suggested prompts; instructions have an 8,000-character limit.	Test your agent, then retain access for yourself. Share only if needed; sharing is a separate action. Official guide
Google Gemini	**Explore Gems** > New Gem > Instructions. Add reference files and select **Save** after previewing.	Open your Gem to reuse its instructions; do not share it if it is personal. Official guide
Grok	**Grok Bot** > New chat > Create new Bot. Set enduring rules in the Bot **Description**; use skills/files for procedures and reference.	Use your personal Bot in its own chat. Grok Projects are not the verified route for these reusable rules. Bot guide
Meta AI	**No confirmed equivalent** to a private Project/Gem/Bot with durable task instructions in consumer Meta AI.	AI Studio stopped new AI-character creation and editing on 10 Aug 2026. Use an external document to retain your instructions. Meta update

Keep a master copy. Save dated instructions in a document you own. A copied Project/Gem/Bot does not update when your master document changes. For credit work, keep official policies in an approved document system, not only in the assistant.
