PUTTING AI AGENTS TO WORK

Anatomy of an AI Agent

The kitchen version

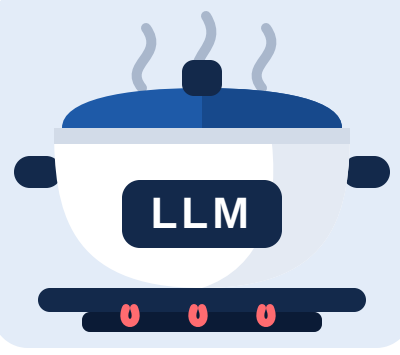

LLM = The Chef

LARGE LANGUAGE MODEL

- Reads, writes and reasons. Trained in every cuisine.
- Knows nothing about your kitchen yet.

IN CREDIT & COLLECTIONS

Drafts a dunning email, but doesn't know your customer.

RAG = Chef + Recipe Book

RETRIEVAL-AUGMENTED GENERATION

- Looks things up before it cooks.
- Works from your recipes, not from guesswork.

IN CREDIT & COLLECTIONS

Checks your payment terms and credit policy first.

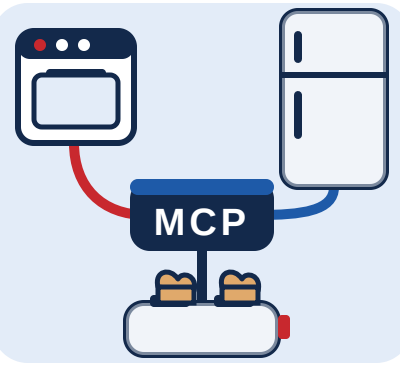

MCP = The Universal Socket

MODEL CONTEXT PROTOCOL

- One standard plug for every appliance.
- Wires the chef to the oven, fridge and your apps.

IN CREDIT & COLLECTIONS

Plugs into your ERP, inbox and spreadsheets.

Skills = Signature Recipes

SAVED, REUSABLE INSTRUCTIONS

- Written down once, cooked the same way every time.
- No re-explaining the dish.

IN CREDIT & COLLECTIONS

Your "chase a 30-day overdue invoice" method, saved once.

AI Agent = The Working Kitchen

LLM + RAG + MCP + SKILLS, PUT TO WORK

- Plans the menu, then cooks every dish.
- Serves finished work, not just advice.

IN CREDIT & COLLECTIONS

Triage the inbox. Screen a credit application. Chase the overdue.

Chef + Recipe Book + Universal Socket + Signature Recipes = a Working Kitchen
